# SISTEMA **Bold-Line**

Il sistema Bold-Line è composto da una serie di profili anta con forma arrotondata da utilizzare sul telaio del sistema Complanare per consentire l'uso del vetrocamera doppio invece di triplo.

Ne risulta una forma armoniosa che esalta le forme sinuose dei profili in alluminio

**Sistema Bold-Line**  
design armonioso e linee sinuose

telaio: 68X70  
anta: 68X81

## Legno Tenero Soft Wood

Uf = 1,4 (W/m<sup>2</sup>K)

## Sistema Bold-Line

**uniform**

Requisiti	Norma di classificazione	Caratteristiche
Trasmittanza termica nodo finestra(Uf)	UNI EN ISO 10077-2	1,4 W/m <sup>2</sup> · K
Tenuta all'acqua	UNI EN 1027-12208	Classe 9a
Permeabilità all'aria	UNI EN 1026-12207	Classe 4
Resistenza al carico di vento	UNI EN 12211-12210	C4
Capacità portante del dispositivo di sicurezza	UNI EN 14351-1	350 N

### Struttura in legno

La struttura in legno è predisposta per l'utilizzo di ferramenta antieffrazione con asse 9 o 13mm.

La struttura, internamente, prevede l'utilizzo di almeno una guarnizione centrale su tutto il perimetro dell'anta o del telaio.

Le specifiche tecniche delle battute e della squadratura sono indicate nel seguente catalogo. Le geometrie interne e la tipologia di vetro sono a discrezione del produttore.

### Telai in alluminio

I profili in alluminio vengono realizzati in lega EN AW6060 T5 forniti come da EN 12020-1 e tolleranze EN 12020-2.

Verniciatura secondo regolamento Qualicoat o con trattamento di ossidazione anodica in classe 15 secondo specifiche del marchio EURA EWAA QUALONOD.

### Fissaggio dei telai e altri accessori

Il fissaggio dei telai avviene tramite clips di supporto in materiale plastico fissate tramite vite, o in particolari casi ad incastro, con la parte lignea.

Consentono l'unione ottimale tra il legno e il metallo alla distanza di 5mm al fine di eliminare la eventuale condensa e garantire la perfetta aerazione della zona di accoppiamento, nonché l'eventuale smontaggio e consentendo una dilatazione libera da tensioni.

### Guarnizioni

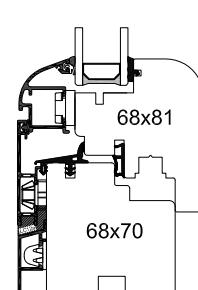

I telai sono rivestiti da una guarnizione perimetrale in EPDM (con incollaggio sugli angoli) che consente l'unione della parte in legno a quella metallica, garantendone la perfetta sigillatura e scarico dell'acqua. Sul vetro viene montata una guarnizione in EPDM coestruso con componente espanso in appoggio sul vetro.

Sul profilo telaio alluminio viene montata una guarnizione in EPDM coestruso per evitare il contatto diretto tra le componenti metalliche.

## Bold-Line System

**uniform**

Requirements	Classification norm	Features
Thermal transmittance(Uf)	UNI EN ISO 10077-2	1,4 W/m <sup>2</sup> · K
Water-tightness	UNI EN 1027-12208	Classe 9a
Air-tightness	UNI EN 1026-12207	Classe 4
Wind-tightness	UNI EN 12211-12210	C4
Load-bearing capacity	UNI EN 14351-1	350 N

### Wood structure

The wood structure is designed to implement anti burglary hardware featuring axis 9 or 13mm.

Internally, the structure encompasses at least one central gasket on the whole perimeter either of the sash or of the frame. The following catalogue contains the technical specifications of the rebates for adjusting the tools. The internal silhouette of the profiles and the typology of glazing are at the discretion of the window manufacturer.

### Aluminum frames

The aluminum profiles are made of EN AW6060 T5 alloy according to EN 12020-1 in respect of tolerances EN 12020-2. Powder coating is performed in conformity with QUALICOAT regulations; anodization process is performed in class 15 according to the specifications of EURA EWAA QUALONOD.

### Assembly of the aluminum frames and other accessories

Alu frames are fixed to the wood by means of plastic clips, either screwed to or embedded into the wood. The clips allow an optimum space between the wood and the metal frames at the correct distance of 5mm, thus allowing neutralization of the materials' dilatation, moisture removal through good ventilation, as well as easy release of the alu frames by rotating the clips.

### Gaskets

The alu frames are equipped with a perimetral gasket in EPDM (with glued corners) aimed at bridging the gap between the wood part and the metal part, thus ensuring perfect sealing and water drainage. Glass is backbedded by a gasket in EPDM that features coextrusion between soft and harder rubber. The alu frames are equipped with EPDM gasket to avoid direct contact between glass and metal components.

## Variante con clips auto-riferimento per telaio e guarnizione premontata

### Fasi di montaggio:

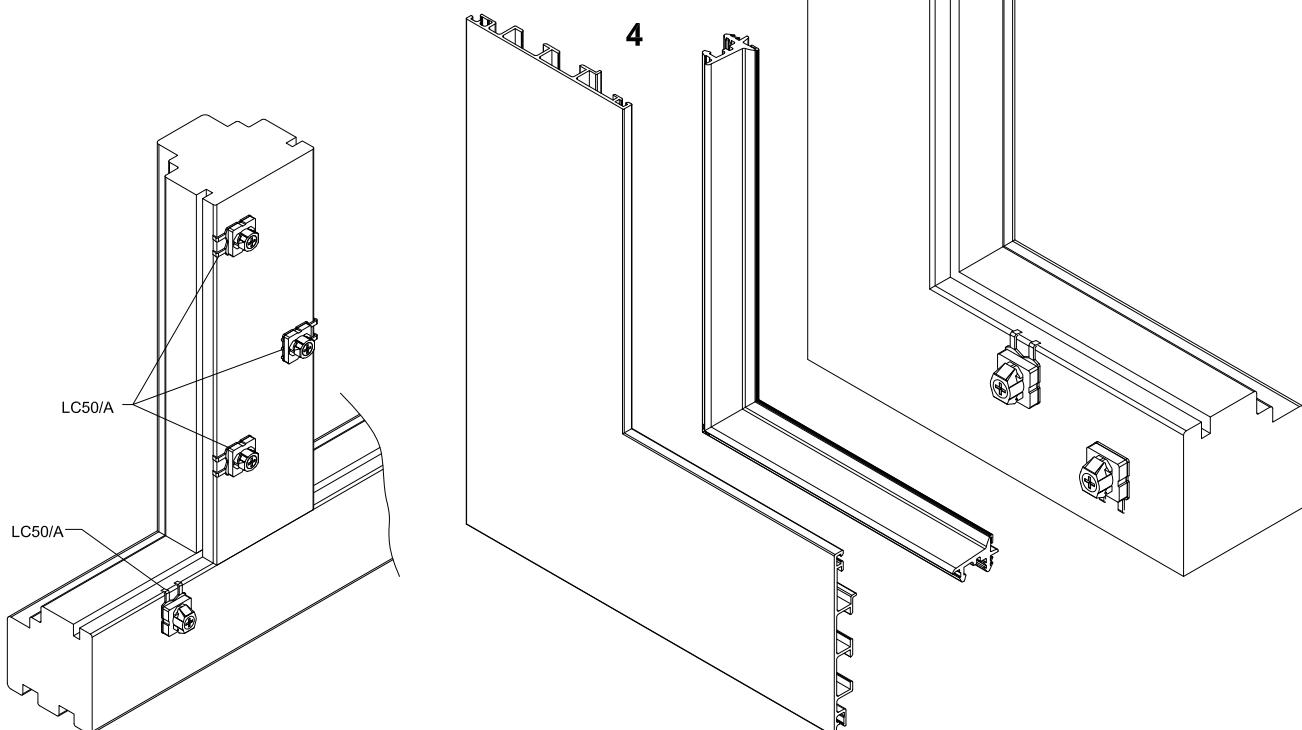

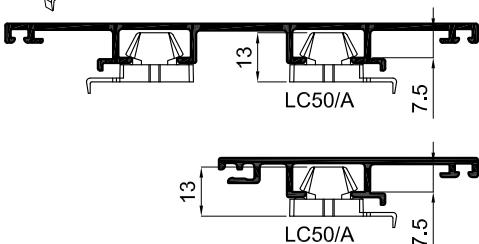

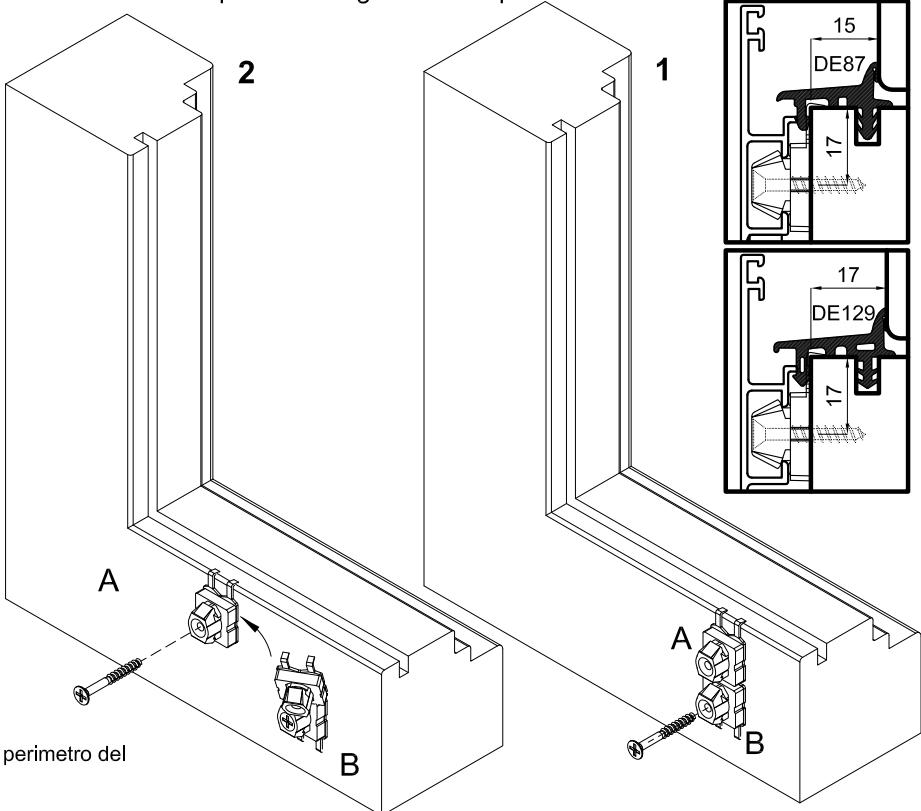

- 1)posizionare le 2 clips unite con riferimento all'interno telaio in legno  
Avvitare la clip inferiore(B)
- 2)Staccare la clip superiore(A)
- 3)Avvitare la clip superiore A sfalsandola dalla precedente di 100mm
- 4)Montaggio della guarnizione perimetrale(DE87-DE129) sul telaio in legno
- 5)montaggio a pressione del telaio in alluminio

### Assembly steps

- 1)position the pair of clips joined together, using the frame's internal dimension as reference point: screw the lower clip onto the wood (B)
- 2)Detach the upper clip (A)
- 3)screw the upper clip A into the wood, shifting its position of 100mm after the previous clip
- 4)fit the perimetral gasket into the wood frame
- 5)press the alu cladding frame onto the clips

Da utilizzare su tutto il perimetro del telaio

#### Attrezzatura per il taglio della guarnizione telaio

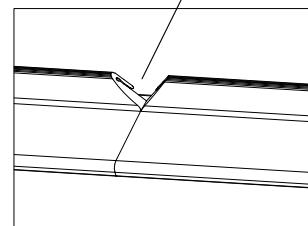

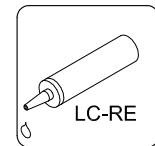

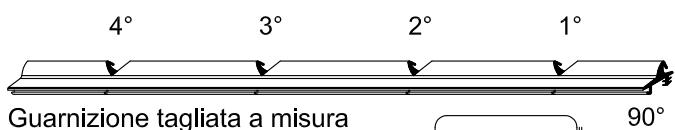

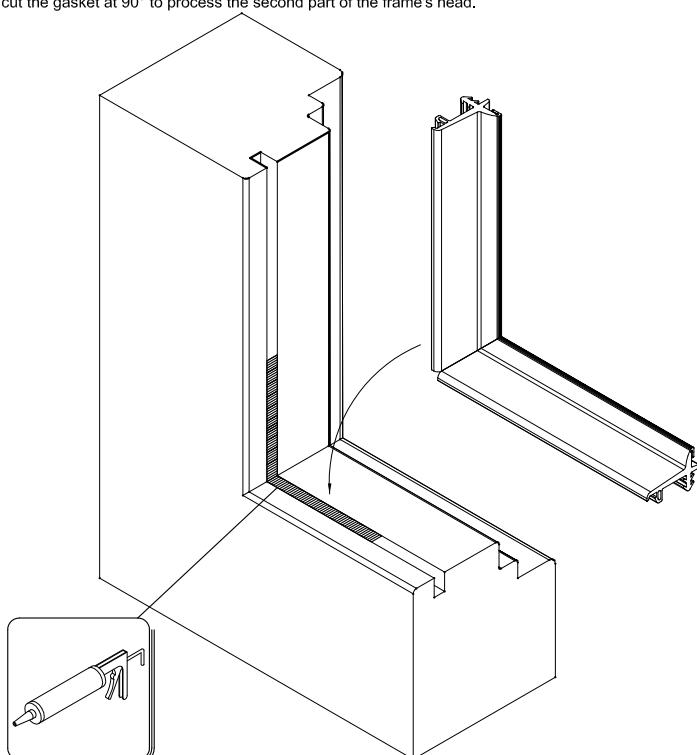

Fasi di taglio delle guarnizioni:

- Tagliare la guarnizione a 90°, posizionarla sul fermo n. 1 per realizzare il primo angolo (prima parte del traverso superiore);
- Posizionare la guarnizione sul fermo n. 2 per realizzare il secondo angolo (montante sinistro)
- Posizionare la guarnizione sul fermo n. 3 per realizzare il terzo angolo (traverso inferiore)
- Posizionare la guarnizione sul fermo n. 2 per realizzare il quarto angolo (montante destro)
- Posizionare la guarnizione sul fermo n. 1, e tagliarla a 90° prendendo come riferimento la Tagliare la guarnizione a 90° per realizzare la seconda parte del traverso superiore.

#### Tools for cutting the frame's gasket

Steps of the gasket's cut:

- cut the gasket at 90°, place it on the point n.1 to process the first corner (first part of the frame's head);
- place the gasket on the point n.2 to process the second corner (frame's left jamb);
- place the gasket on the point n.3 to process the third corner (frame sill);
- place the gasket on the point n.2 to process the fourth corner (frame's right jamb);
- place the gasket on the point n.1 and cut it at 90° viewing the blade as reference point. Then cut the gasket at 90° to process the second part of the frame's head.

#### Istruzioni per l'incollaggio degli sprossen al vetro:

- Pulire la superficie del vetro con solvente alcolico;
- Pulire la superficie del profilo in alluminio in cui andrà in appoggio il nastro con soluzione LCPRIMER86;
- Fare aderire il nastro al profilo in alluminio e successivamente al vetro, esercitando più possibile una pressione uniforme.

NOTA: la temperatura ideale per l'applicazione del nastro biadesivo è da 20 a 38° C. L'applicazione al di sotto dei 10° C è sconsigliata poichè l'adesivo risulta troppo rigido per aderire in modo appropriato.

*Instructions for glueing the Georgian bars onto the glazing*

*-clean the surface of the glazing with solvent based cleaner*

*-use LCPRIMER86 to clean the surface of the alu profile before applying the double sided adhesive tape*

*-apply the double sided adhesive tape onto the alu profile first, and then press onto the glazing using uniform pressure*

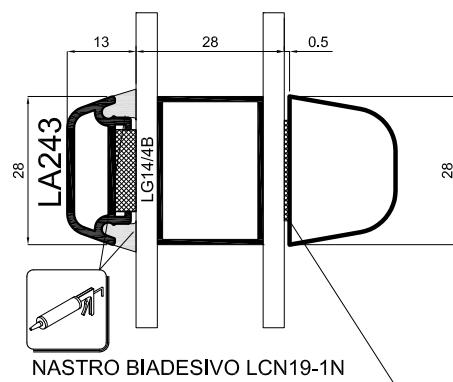

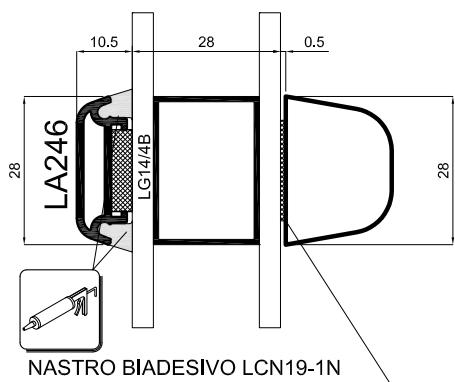

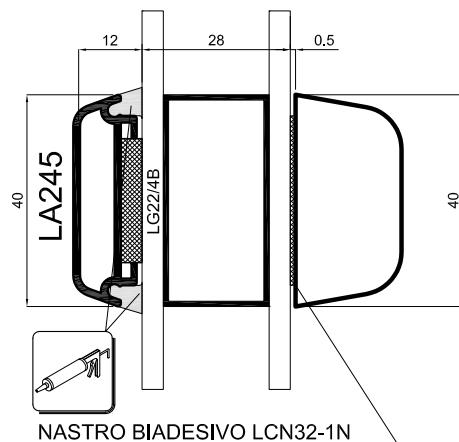

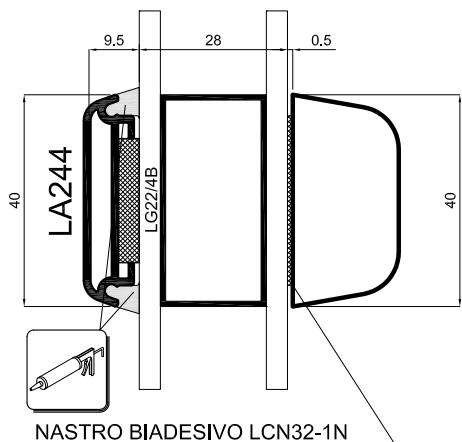

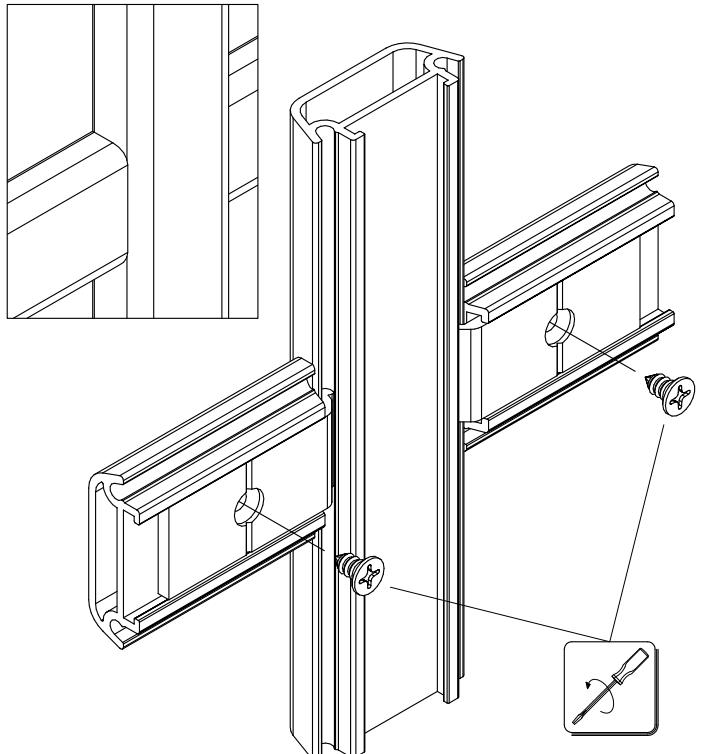

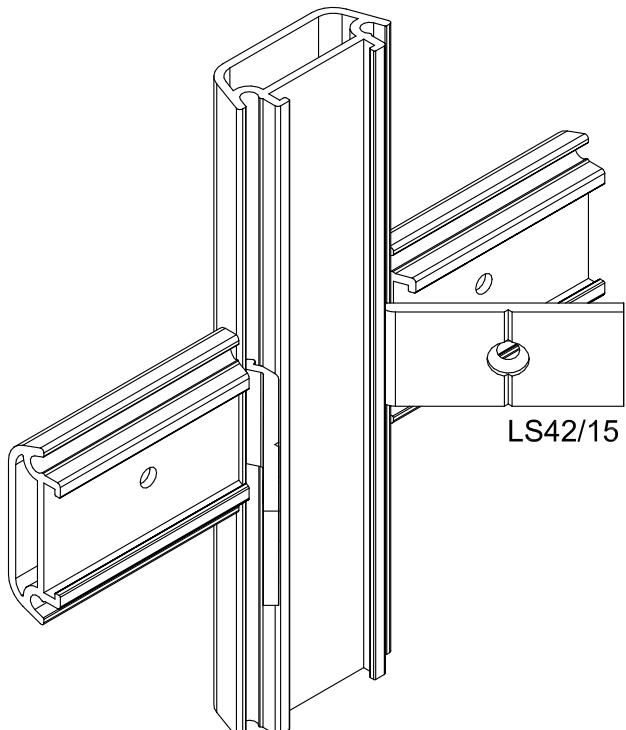

*Please note that: the ideal temperature for applying the double sided adhesive tape is between 20 and 38°C. Application below 10°C is not recommended because the double sided adhesive tape would be too much rigid and would not adhere appropriately.*

#### PORTATA CON N°2 CERNIERE:

150Kg con misura massima porta LxH= 1000x2000mm.

Si sconsiglia l'applicazione su ante di larghezza superiore ad 1mt.

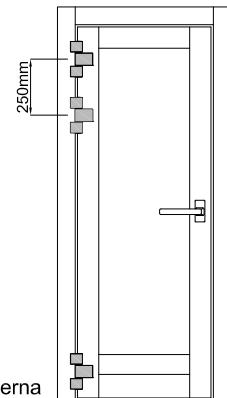

Per altezza superiore a 2 mt e fino a 2,2 mt è necessaria l'applicazione di una terza cerniera a circa 250mm dalla cerniera superiore(vedi disegno).

*Load with 2 hinges:*

*150kg with a maximum door WxH = 1000x2000mm.*

*Should not be applied on doors of width of more than 1m.*

*For height greater than 2 meters and up to 2.2 meters, is required the application of a third hinge about 250mm from the top hinge (see drawing).*

Cacciavite bit speciale per vite d'ancoraggio e per viti di fissaggio  
Inserto E 6,3/Chiave esagonale da 6 mm  
N° A750A0027

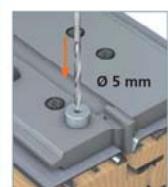

Boccola dima di foratura  
N° A650A0056 Ø 5 mm/Ø 11 mm

Punta di trapano a due diametri  
N° A650A0035 Ø 6 mm/Ø 11 mm

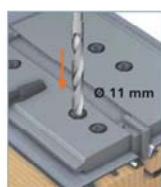

Trapano  
N° K450A0001 Ø 5 mm

Dima di foratura su richiesta

#### Montaggio della cerniera

Preforo opzionale:  
con boccola dima di  
foratura  
N° A650A0056.

Forare Ø 11 mm.

Avvitare la vite di anco-  
raggio fino al collare.

Fissare la cerniera avvi-  
tando le apposite viti a  
fondo nella filettatura  
delle viti di ancoraggio  
(forza di serraggio  
20 – 30 Nm).

Avvitare il mandrino di  
sollevamento.

Applicare a scatto  
gli elementi copritive.  
Inserire i tappi.

#### Regolare la pressione guarnizione

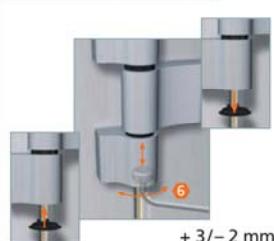

Ruotare la boccola del  
supporto di ± 90° finché  
non si avverte lo scatto di  
innesto (pressione sulla  
guarnizione ± 0,5 mm).  
Con la stella di regola-  
zione ruotare la boccola  
inferiore del supporto  
di ± 90°, finché non si av-  
verte lo scatto di innesto.

#### Regolazione orizzontale

± 2,5 mm

#### Regolazione in altezza

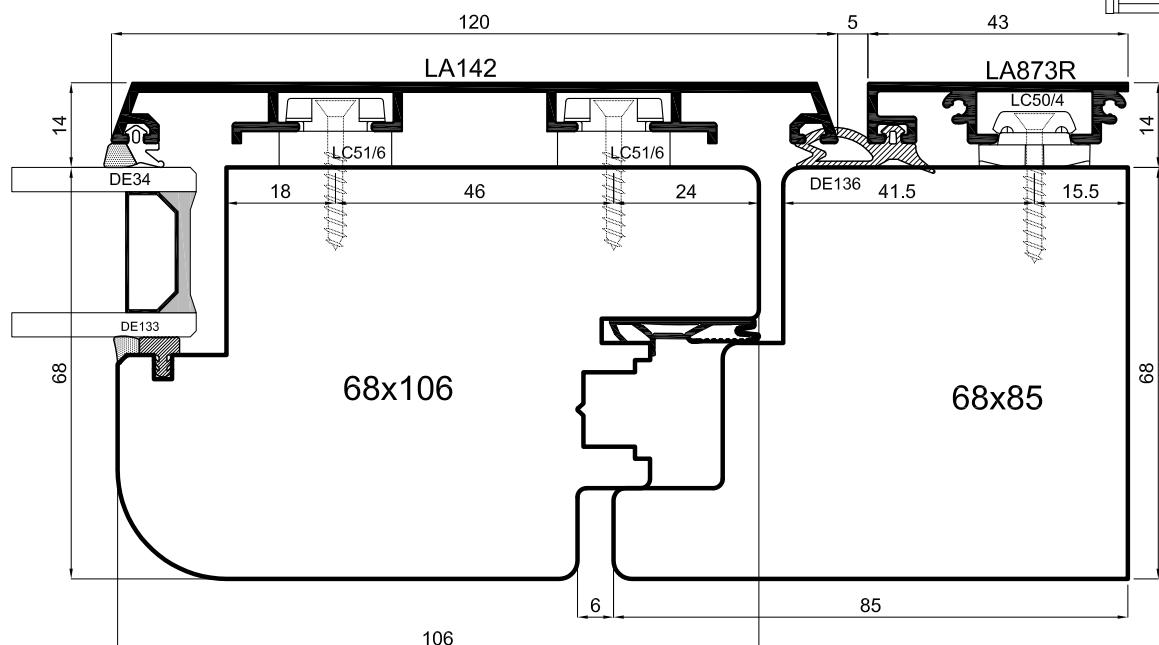

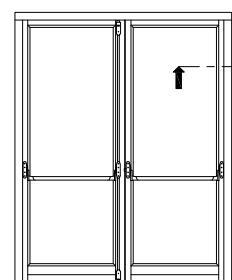

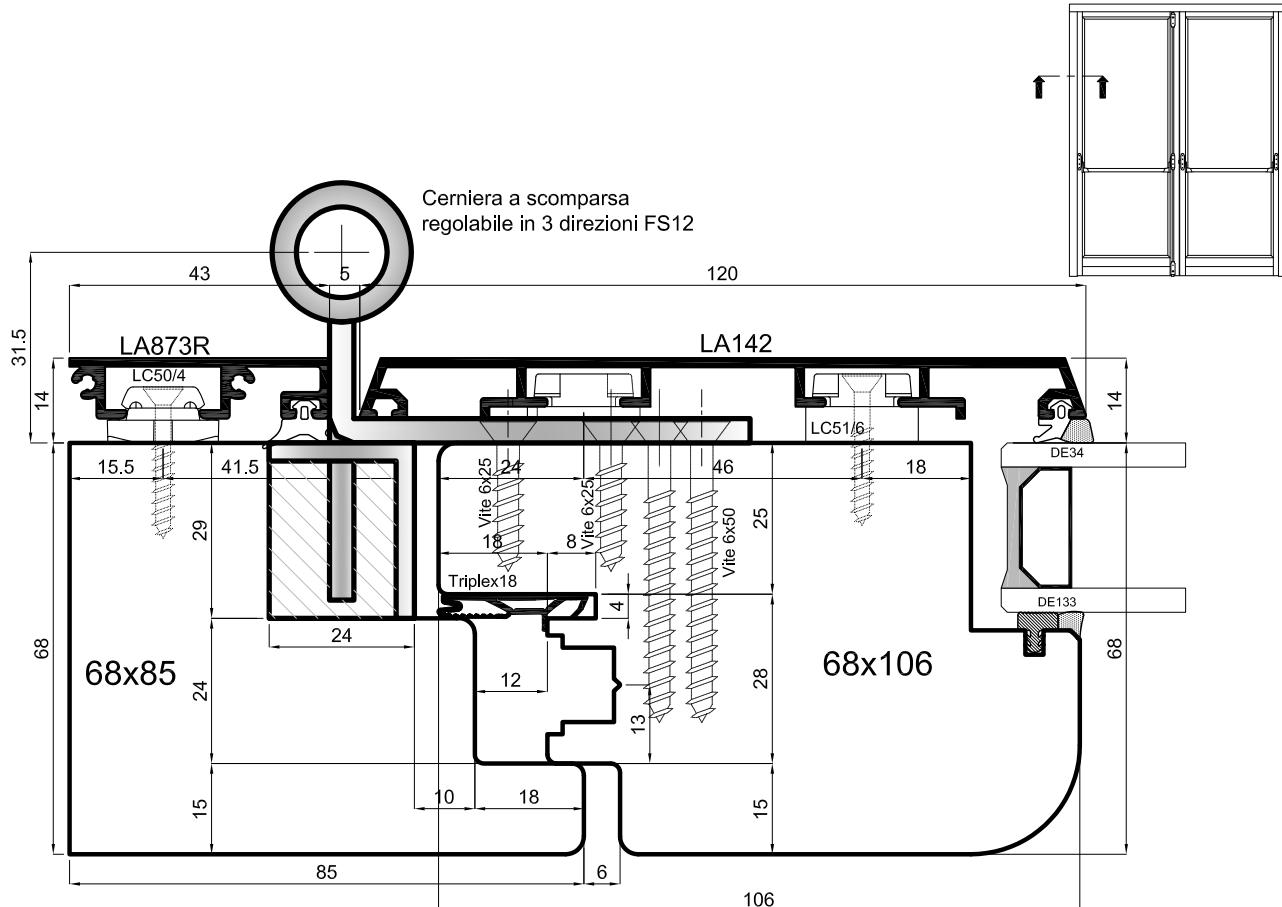

+ 3/-2 mm
